the problem: L8, 25 rpm, 7°
C^*
time after release (s)
C^* 0.10 → 0.50
C^* 0.25 → 0.50
C^* 0.25 → 0.75
C^* 0.50 → 0.75
error on unseen runs (RMS of ln ratio)
runs with the higher threshold
mfbml
GPR, linear mean prior
GPR, lower threshold as prior
lower threshold times a constant
